|---------------------------------------------|-------------------|----------------------------------------------------------------|
| Swale (970), Dover (1073), Maidstone (1106) | Critical Councils | Top 3 councils with the highest High/Critical incidents.       |
| Mixed Waste (2552)                          | Primary Issue     | Primary Waste Types account for the largest share of incidents |
| May (4200)                                  | Seasonal Pattern  | Month of the year with the highest incidents reported          |
| Public Report (6745)                        | Discovery Pattern | Method how incidents are most commonly detected                |
| Night (6602)                                | Time Pattern      | Time of day with the highest reporting                         |

## Recommended operational responses

**Hypothetical Intelligence Report:** The analysis identifies several opportunities for targeted intervention. **Critical geographic hotspots** should be prioritised for targeted enforcement and monitoring, while areas experiencing a **dominant waste category** should receive focused prevention and public education campaigns. Where a **seasonal spike** in incidents is identified, monitoring and enforcement resources should be increased ahead of the expected peak period. Similarly, **time-of-day patterns** should be used to align enforcement resources with periods of higher incident activity. Finally, where intelligence or evidence is limited, improvements to **CCTV coverage, public reporting mechanisms, and evidence capture** could strengthen future investigations and support more informed operational decision-making.
